

# Understanding payment processors and integrations

A payment processor helps you seamlessly collect payments made with credit or debit cards, or bank transfer, between businesses and their customers.

Commerce Hub offers two payment processing choices: HubSpot payments and Stripe payment processing.

Below is a breakdown of these choices to help you choose the best one for your business.

## HubSpot payments

Enroll in HubSpot payments to use all the commerce tools within Commerce Hub without needing a separate integration.

United States only.

## Stripe payment processing

Connect a new or existing Stripe account with Commerce Hub to process payments within HubSpot as your primary system while syncing data back to Stripe.

## Stripe Data Sync integration

Import your Stripe data into HubSpot. This integration does not enable payment processing in HubSpot nor give access to Commerce Hub.

This integration is used to import Stripe data into HubSpot and sync customer contacts back to Stripe.
